

WeatherBond EPDM

White Membrane with Fleece and Pre-Applied Seam Tape

WeatherBond's White EPDM roofing system combines the environmental benefits of a white, reflective roofing system with the simplicity and durability of an EPDM roof membrane. Because of its enhanced reflectivity, WeatherBond White EPDM contributes to lower energy costs, is ENERGY STAR® qualified and can contribute toward LEED® credit requirements.

Fleece

WeatherBond White EPDM membrane with Fleece provides additional durability and performance by incorporating 60-mil non-reinforced white EPDM membrane with 55 mils of fleece backing, resulting in a 115-mil total sheet thickness.

WeatherBond White EPDM membrane with Fleece provides 40% greater puncture resistance and 180% greater tear resistance than conventional 60-mil EPDM.

- Passes UL-2218 Class 4 hail resistance test
- Passes FM's severe hail test
- Passes National Bureau of Standards-23 Ice Ball test up to 3" diameter hail at 32°F

Pre-Applied Seam Tape

WeatherBond White EPDM membrane with Fleece factory-applies the Seam Tape to the membrane, greatly reducing the time required for completing seams and minimizing your labor costs.

Because the primer and seam tape are applied in a factory-controlled setting, they allow for a more consistent seam placement, creating a professional finished appearance for virtually any low-slope roof.

- Primer and Peel & Stick White EPDM Seam Tape are pre-applied in a factory setting
- Reduces time required to complete seams by up to 75%, allowing you to complete jobs faster
- Pre-applied Peel & Stick seam tape results in more consistent seam placement

WeatherBond White EPDM membrane with Fleece and pre-applied tape is available in 5'-wide rolls with 6" Peel & Stick Seam Tape.

Features and Benefits

- 40% greater puncture resistance
- 80% greater tear resistance
- Increased hail resistance
- Reduces time required to complete seams by up to 75%
- More consistent seam placement
