WeatherBond PVC/KEE HP
Fully Adhered Metal Retrofit Roofing System

Single-Ply Simplified

System Features and Benefits
- 50-, 60-, and 80-mil membrane thicknesses
- White, gray, tan, light gray and slate gray colors available
- Adds insulating value
- Heat-weldable seams
- Roofing membrane is ENERGY STAR® qualified, CRRC rated, and can contribute to LEED® requirements
- Excellent wind uplift performance
- Industry-leading PVC and KEE HP membranes provide exceptional weatherability, durability, and long-term rooftop performance

Typical Application
1. WeatherBond PVC or KEE HP Reinforced Membrane
2. Bonding Adhesive
3. Acceptable Insulation
4. Flute Fill Insulation
5. Insulation Fasteners and Plates
6. Existing Metal Roof

Colors: White, Gray, Tan, Light Gray and Slate Gray
Thicknesses: 50-, 60- and 80-mil
Standard Widths: 40.5”, 5’, 81”, 10’
Standard Lengths: 50-mil – 100’, 60-mil – 100’, 80-mil – 75’

WeatherBond PVC and KEE HP Membranes
WeatherBond PVC and KEE HP are high-performance, heat-weldable, single-ply membranes that provide outstanding long-term performance in new construction and re-roofing applications. WeatherBond KEE HP membranes utilize the highest grade of DuPont™ Elvaloy® to ensure the membrane can withstand extreme climatic conditions.

Certified Fabricated Accessories
WeatherBond offers over a dozen prefabricated, in-stock accessories, and countless custom-order accessories. All carry a CFA (Certified Fabricated Accessory) stamp of approval, so you know they've been manufactured to the highest quality standards. Every WeatherBond CFA saves you time and money during installation.
Metal Retrofit Fully Adhered Roofing System Installation

Flute-Fill Insulation:
A key component of a metal retrofit system is the addition of custom-fit insulation between the standing seams of the metal roof panels. WeatherBond offers both EPS (expanded polystyrene) and Polyiso flute-fill insulation that can be factory cut to fit between each metal panel. This insulation layer also adds R-value and can be loose-laid or adhered.

Additional Insulation:
Once flute-fill insulation has been installed, additional insulation ranging from a ¼-inch cover board to several inches of polyiso insulation can be mechanically fastened to the metal roof to create a smooth flat substrate for the membrane. Adding polyiso insulation and cover boards can add additional R-value to the system. Using a high-compressive strength polyiso cover board or gypsum cover board can also enhance impact resistance and fire resistance.

WeatherBond PVC/KEE HP Membrane:
PVC or KEE HP membrane is fully adhered to the insulation with WeatherBond’s Low-VOC Bonding Adhesive, CAV-GRIP PVC (PVC only), or HydroBond Bonding Adhesive (PVC only). Adjoining sheets of membrane are overlapped and joined together with a minimum 1-½” wide hot air weld.

Membrane and System Strengths
- Economical to install over existing metal roofs
- Specially designed fastening system using induction welding plates anchors into the structural purlins (the strongest point of the roof) for optimum performance
- Easily installed over most aged metal roofs
- Heat-weldable seams provide a complete, monolithic membrane assembly
- WeatherBond PVC and KEE HP reinforced membranes are durable, puncture resistant, and ENERGY STAR qualified for cool roof designs

Fully Adhered
