

WeatherBond **KEE HP** Membrane

Overview

WeatherBond KEE HP (High Performance) membrane is manufactured using DuPont® Elvaloy® KEE HP resin modifier. KEE HP enhances the performance of PVC compounds by providing outstanding thermal stability and flexibility while extending the low- and high-temperature performance limits of standard KEE. The addition of Elvaloy KEE HP, a non-volatile resin modifier, provides enhanced heat and chemical resistance.

The physical properties of the membrane are enhanced by a tenacious polyester fabric that is encapsulated by thick KEE HP PVC-based top and bottom plies. The smooth surface of the KEE HP membrane allows a total surface fusion weld over a wide temperature range, creating a consistent, watertight, one-piece roof assembly. WeatherBond KEE HP is available in white, gray, and tan.

Features and Benefits

- Chemical resistance
- Energy efficiency
- Heat weldability
- Low-temperature flexibility
- Impact/puncture resistance
- Easy installation
- Solar, UV, ozone, oxidation resistance

Installation

WeatherBond KEE HP roof systems are fast to install, as minimal labor and few components are required. The membranes weld quickly, cleanly and consistently.

Mechanically Attached Roofing System

The mechanically attached system starts with approved insulation being fastened with a minimum of 5 fasteners per 4' by 8' board. The KEE HP reinforced membrane is then mechanically attached to the deck using HPWX Fasteners and Plates. Adjoining sheets of KEE HP membrane are overlapped over the fasteners and plates and joined together with a minimum 1½" wide hot-air weld.

Fully Adhered Roofing System

The fully adhered system starts with a suitable surface upon which to apply the Low-VOC PVC Bonding Adhesive. Refer to respective technical data bulletins or WeatherBond specifications and details for complete installation information.

REVIEW CURRENT WEATHERBOND INSTALLATION INSTRUCTIONS FOR SPECIFIC INSTALLATION REQUIREMENTS.

Precautions

1. Sunglasses that filter out ultraviolet light are strongly recommended as the white surface is highly reflective to sunlight. Roofing technicians should dress appropriately and wear sunscreen to protect skin from the sun.
2. Smooth surfaces may be slippery due to frost and ice build-up. Exercise caution during cold conditions to prevent falls.
3. Care must be exercised when working close to a roof edge when the surrounding area is snow-covered, as the roof edge may not be clearly visible.
4. Use proper stacking procedures to ensure sufficient stability of the materials.
5. Exercise caution when walking on wet membrane. Membranes may be slippery when wet.
6. Store WeatherBond KEE HP membrane in the original undisturbed plastic wrap in a cool, shaded area and cover with light-colored, breathable, waterproof tarpaulins. KEE HP membrane that has been exposed to the weather or contaminated with dirt must be prepared with PVC Membrane Cleaner prior to hot-air welding.

Supplemental Approvals, Statements and Characteristics

WeatherBond KEE HP meets or exceeds the requirements of ASTM D4434 Standard Specification for Poly(Vinyl Chloride) Sheet Roofing. KEE HP is classified as Type III and/or Type IV as defined by ASTM D4434.

Radiative Properties for ENERGY STAR[®], Cool Roof Rating Council (CRRC) & LEED[®]

Physical Property	Test Method	White KEE HP	Tan KEE HP	Gray KEE HP
ENERGY STAR - E-903 Initial Solar Reflectance	Solar Spectrum Reflectometer	0.82	0.74	0.57
ENERGY STAR - E-903 Solar Reflectance after 3 years	Solar Spectrum Reflectometer (Uncleaned)	Pending	Pending	Pending
CRRC - Initial Solar Reflectance	ASTM C1549	0.87	0.73	0.58
CRRC - Solar Reflectance after 3 years	ASTM C1549 (uncleaned)	0.71*	0.60*	0.50*
