Overview
Let WeatherBond simplify your next EPDM installation with their Peel & Stick (P&S) Curb Flashing. The most efficient means to flash a curb as membrane comes pre-cut 20” wide with 6” Peel & Stick Seam Tape already applied. Production time on projects with numerous curbs or wall flashings can be substantially reduced with this labor-saving accessory.

Features and Benefits
- Available in 20” x 50’ rolls of cured 60-mil EPDM flashing
- Pre-cut 20” wide with 6” P&S Seam Tape already applied
- Provides up to 30% labor savings for flashing curbs and walls
- Cleaner appearance and stronger seams

Installation
1. Attach deck membrane at the curb according to specific WeatherBond system details.
2. Cut a piece of P&S Curb Flashing equal in length to the perimeter of the curb plus 3” minimum (i.e. a 2’ x 2’ curb would require an 8’ 3” length of P&S Curb Flashing).
3. Cut the width of the P&S Curb Flashing to match the height of the curb plus 6” for the splice and 2” to go over the top of the curb. (Width = curb height + 8”).
4. The entire surface where the P&S Curb Flashing will be applied must be clean. The adhesive on the back of the P&S Curb Flashing will not adhere to dusty or dirty surfaces. Any residual contamination will be detrimental to the bond strength of the adhesive.
5. Remove all foreign material.
   a. Remove excess mica dust by brooming or wiping with a clean, dry rag.
   b. The use of Weathered Membrane Cleaner is necessary to allow the EPDM Primer to be roller applied. This cleaning process is essential on membrane that has been exposed for a number of weeks.
      Note: Permeation-resistant gloves (that meet ANSI/ISEA 105-2005) are required for hand protection when cleaners or primers are being used.
   c. Allow the cleaned membrane to dry thoroughly before proceeding.
6. Place the P&S Curb Flashing on a flat surface with the tape side up and the release liner intact.
7. Apply WeatherBond LC-60 or Low-VOC Bonding Adhesive to the curb and to the P&S Curb Flashing.
8. Apply Multi-Purpose or Low-VOC EPDM Primer to the splice area on the deck membrane. Follow proper application instructions for the specific primer and membrane being used.
9. After the bonding adhesive and primer have flashed off properly, bond the P&S Curb Flashing to the curb. Wrap the entire curb, leaving the area containing the tape adhesive folded upwards with release liner still in place. Care should be taken not to stretch the P&S Curb Flashing.
10. To complete the splice between the P&S Curb Flashing and the deck membrane, cut the P&S Curb Flashing at each corner of the curb, allowing the P&S Curb Flashing to fall in place. Round all cut corners. Press the P&S Curb Flashing into the angle change as tightly as possible.
11. With the tape adhesive laying flat on the primed surface, remove the release liner by pulling it out from beneath the P&S Curb Flashing while simultaneously pressing the tape onto the primed surface using firm, even hand pressure across the splice towards the splice edge. Immediately roll the splice with a 2” (50 mm)-wide roller, using positive pressure.
12. Broom the mated P&S Curb Flashing over the curb to ensure proper mating of the bonding adhesive.
13. Make the vertical splice in the P&S Curb Flashing as per WeatherBond WBRC-5.2 detail.
14. Flash the corners of the curb as per WeatherBond WBRC-15 details.

REVIEW CURRENT WEATHERBOND INSTALLATION INSTRUCTIONS FOR SPECIFIC INSTALLATION REQUIREMENTS.
Precautions

1. Avoid prolonged contact with skin. In case of contact with skin, thoroughly wash affected area with soap and water.

2. WeatherBond Bonding Adhesive and EPDM Primer must be used when installing P&S Curb Flashing.

3. P&S Curb Flashing must be stored in a dry area. In warm, sunny weather, keep P&S Curb Flashing in the box or in a shaded area until ready for use.

4. Due to solvent flash-off, condensation may form on freshly applied Primer when the ambient temperature is near the dew point. If condensation develops, the application of Primer and installation of P&S Curb Flashing must be discontinued, as proper adhesion will not be achieved. Allow the primed surface to dry and apply a thin freshener coat of Primer to the previously coated surface when conditions allow.

5. Jobsite storage temperatures in excess of 90°F (32°C) may affect product shelf life. Prolonged jobsite exposure to temperatures below 40°F (4°C) will cause the adhesive to lose tack and, in extreme cases, will not bond to the EPDM membrane. If this situation is encountered, move P&S Curb Flashing to a warm area and allow it to return to a minimum of 60°F (15°C).

6. In order to achieve proper adhesion to the deck membrane when installing P&S Curb Flashing at temperatures below 40°F (5°C), heat the primed area of the deck membrane with an air gun as the tape adhesive is applied and pressed into place.

7. Do not allow waste products (petroleum, grease, oil, solvents, vegetable or mineral oil, animal fats, etc.) or direct steam venting to come in contact with the P&S Curb Flashing.

8. KEEP OUT OF THE REACH OF CHILDREN.
