

WeatherBond **PVC**

Polyester Reinforced Fleece Membrane

Overview

WeatherBond PVC Polyester Reinforced Fleece membrane is tough, durable, and versatile, making it ideal for a wide variety of re-roofing and new construction projects. Manufactured using a hot-melt extrusion process for complete scrim encapsulation, this product is available in total sheet thicknesses of 115, and 135 mils.

WeatherBond PVC Polyester Reinforced Fleece membrane offers exceptional weatherability, flexibility, and toughness due to its polyester reinforcing scrim and polyester fleece backing. The polyester reinforcing scrim provides the sheet with added breaking strength, tear strength and puncture resistance for fully adhered or mechanically attached applications; the fleece backing adds to the puncture-resistance of the membrane and provides a built-in separation layer against rough concrete decks or existing asphaltic-based roofing systems. Years of proven PVC formulation performance helps to ensure the membrane remains pliable and weldable as it ages.

Features and Benefits

- Available in white, gray, light gray, slate gray, and tan and offered in 115- and 135-mil thicknesses
- Roll Sizes: 115-mil = 10' x 100'
135-mil = 10' x 75'
- Provides superior wind uplift performance and ratings (up to FM 1-990) due to a mechanical bond between the fleece and adhesive
- Passes UL-2218 Class 4 rating
- Labor-saving 10'-wide sheets result in 67% fewer seams than a modified bitumen system of comparable size
- Polyester reinforcing scrim provides exceptional puncture strength

- Low-volatility plasticizer in proven performance PVC formulation
- Good chemical resistance to acids, bases, restaurant oils, fats, greases, and acid rain
- Can contribute to LEED® (Leadership in Energy and Environmental Design) credits.
- White and Light Gray PVC are California Title 24 compliant

Installation

Mechanically Attached Roofing System

The mechanically attached system starts with approved insulation being fastened with a minimum of 5 fasteners per 4' x 8' board. The WeatherBond PVC Fleece membrane is then mechanically fastened to the deck using HPWX Fasteners and HPWX Plates. Adjoining sheets of WeatherBond PVC Fleece membrane are overlapped over the fasteners and plates and joined together with a minimum 1½"-wide hot-air weld.

Adhered Roofing System – Low Rise Foam

Insulation is mechanically fastened or adhered with Flexible DASH Adhesive to the roof deck. Spray-apply, splatter, or extrude adhesive onto the substrate, and allow foam to develop string/body/gel prior to setting fleece membrane into the adhesive. Roll fleece membrane with a 30"-wide, 150-pound (68 kg) segmented weighted roller to ensure full embedment. Splices are hot-air welded.

Adhered Roofing System – Water Based

The fully adhered system starts with a suitable surface on which to apply the HydroBond™ Water-Based Adhesive.

HydroBond can be applied to the approved substrate with a medium nap roller. Once the adhesive has been applied, roll the membrane in place. To prevent over-drying, WeatherBond recommends applying the adhesive 3'-4' at a time ahead of the roll. Immediately broom the membrane starting from the center and working out to the sides of the sheet using a soft bristle push broom to work out any air bubbles. Immediately after brooming, roll the adhered membrane in two directions in a crossways pattern using a minimum 150-lb (68 kg) segmented membrane roller.

REVIEW CURRENT WEATHERBOND INSTALLATION INSTRUCTIONS FOR SPECIFIC INSTALLATION REQUIREMENTS.

Supplemental Approvals, Statements, and Characteristics

WeatherBond PVC Polyester Reinforced Fleece membranes meet or exceed the requirements of ASTM D4434 Standard Specification for Poly (Vinyl Chloride) Sheet Roofing WeatherBond PVC Fleece is classified as Type III or Type IV as defined by ASTM D4434.

Precautions

1. Use proper stacking procedures to ensure sufficient stability of the materials.
2. Exercise caution when walking on wet membrane; membranes may be slippery when wet.
3. Sunglasses which filter out ultraviolet light are strongly recommended since white surfaces are highly reflective to sunlight. Roofing technicians should dress appropriately and wear sunscreen.
4. White surfaces reflect heat and may become slippery due to frost and ice accumulation.
5. Care must be exercised when working close to a roof edge, particularly when the surrounding area is snow-covered, as the roof edge may not be clearly visible.
6. Fleece membrane rolls must be tarped and elevated to keep them dry prior to installation. If the fleece gets wet, use a wet vac system to help remove moisture from the fleece.
7. PVC membrane that has been exposed to the weather must be prepared with WeatherBond's PVC & KEE HP Membrane Cleaner prior to hot-air welding.

Radiative Properties for Cool Roof Rating Council (CRRC) and LEED

Physical Property	Test Method	White PVC	Tan PVC	Gray PVC	Light Gray PVC	Slate Gray PVC
CRRC - Initial Solar Reflectance	ASTM C1549	0.86	0.72	0.59	0.74	N/A
CRRC - Solar Reflectance after 3 years	ASTM C1549 (uncleaned)	0.63	0.60*	0.49*	0.64*	N/A
CRRC - Initial Thermal Emittance	ASTM C1371	0.89	0.87	0.89	0.88	N/A
