Application
1. Prepare all substrates by removing any irregularities and any loose or foreign materials such as dirt, water, grease, oil, lacquers, or release agents. Ensure that all metal surfaces are ground down to expose bare metal. Prepare membrane by sanding with 60-grit sandpaper.
2. Apply the appropriate primer to membrane and allow to flash off. Apply appropriate primer to all other surfaces to which flashing will be applied. Refer to WeatherBond specifications and details for preparation and priming instructions.
3. Cut and prepare all reinforcing fleece before mixing resin.
4. Mix resin (Component A) with a clean spiral agitator until the liquid is a uniform white or gray color. Add hardener (Component B) to Component A and mix with a spiral agitator for 2 minutes or until both liquids are thoroughly blended.

NOTE: For Sachet Packaging
Remove bag from the aluminum packaging. Knead white or gray resin (Component A) thoroughly until a uniform color is achieved. Pull away the rubber cord separating the two components so that Components A and B can be mixed together. Knead the bag quickly and thoroughly for approximately 1 minute so that a homogenous resin is formed. The resin should be a uniform color, with no light or dark streaks present.

After the resin is mixed, cut off one corner of the bag and pour entire sachet of resin into a clean, new mixing pail. Working quickly, apply at a rate of approximately 13.6 FT² (1.3 m²) per gallon.
5. Using a nap roller or brush, apply two-thirds of the resin evenly onto the substrate using even strokes.
6. Roll the LIQUISEAL Liquid Flashing Fleece directly into the LIQUISEAL Liquid Flashing Resin, ensuring that the SMOOTH SIDE IS FACING UP (natural unrolling procedure) and avoiding folds, wrinkles, and air pockets.
7. Apply the remaining one-third of the resin and use the roller or brush to work the resin into the fleece, saturating from the bottom up. All areas of the fleece should be completely saturated with resin.

REVIEW CURRENT WEATHERBOND APPLICATION INSTRUCTIONS FOR SPECIFIC APPLICATION REQUIREMENTS.
Disposal
Cured LIQUISEAL Liquid Flashing Resin may be disposed of in standard landfills. This is accomplished by thoroughly mixing all components.

Note: Uncured resin is considered a hazardous material and must be handled in accordance with local, state, and federal regulations. Do not dispose of uncured resin.

Precautions
1. Always store in a cool, dry location between 35–80°F (1.7–27°C). Do not store in direct sunlight. Approximate shelf life is 12 months with proper storage. Best practice is to store material at 65–70°F (18–21°C) for 24 hours before use.
2. Do not install if ambient temperature is below 40°F (4°C) or above 90°F (32°C).
3. Do not break down work packs into smaller quantities; mix the entire work pack.
4. Prepare surfaces and pre-cut all fleece before mixing resin. Pot life will be shorter as ambient temperature rises.
5. Use appropriate safety glasses and protect hands and wrists by wearing gloves.
6. Avoid contact with eyes and skin. If swallowed, DO NOT INDUCE VOMITING. Call a physician immediately.
7. KEEP OUT OF THE REACH OF CHILDREN.
