DensDeck® StormX™ Prime Roof Board

Installation
DensDeck StormX may be secured with Flexible DASH™ Adhesive, fastened in accordance with an approved fastening pattern, or mopped with hot asphalt. Maximum asphalt application temperatures of 425°F (218°C) to 450°F (232°C) are recommended. Application temperatures above these recommended temperatures may adversely affect roof system performance. Edge joints should be located on and parallel to deck ribs. End joints of adjacent lengths should be staggered.

- This material shall be installed with ends and edges butted tightly.
- When installed over combustible wood decks or insulations, all joints should be staggered.
- In accordance with approved shop drawings, FM-approved fasteners shall be installed with plates through the roof board, flush with the surface.
- When attaching VapAir Seal™ 725TR, use DensDeck StormX in conjunction with CCW-702, 702LV, or CAV-GRIP™ III Adhesive/Primer.

Precautions
1. StormX must be kept dry before, during, and after installation. Apply only as much roof board as can be covered by roof membrane in the same day.
2. When applying solvent-based adhesives or primers, allow sufficient time for the solvents to flash off.
3. StormX should not be subjected to abnormal or excessive loads or foot traffic, such as, but not limited to, use on plaza decks or under steel-wheeled equipment that may fracture or damage the panels.
4. In ballasted roofing systems, StormX is not an acceptable membrane underlayment.

Overview
DensDeck StormX Prime Roof Board is a reinforced gypsum cover board with an enhanced, moisture-resistant core and coated glass mat facers. DensDeck StormX is extremely durable and is approved for use in assemblies meeting FM’s Very Severe Hail (VSH) Classification.

Features and Benefits
- Provides added protection from excessive foot traffic, wind, and hail
- First gypsum cover board to meet FM VSH classification under single-ply membranes
- Approved as a thermal barrier over combustible and non-combustible roof decks
- Achieves UL 790 Class A and FM Class 1 approvals
- Manufactured to meet the “Type X” requirements of ASTM C1177

1. Tested in accordance with ASTM C473 method B.
2. Tested in accordance with ASTM E661.
3. Tested in accordance with ASTM E96 (dry cup method).
4. Tested in accordance with ASTM C518 (heat flow meter).
5. Specified values per ASTM C1177.
6. Tested in accordance with ASTM C473.
7. When tested, as manufactured, in accordance with ASTM D3273, DensDeck Roof Boards have scored a 10, the highest level of performance for mold resistance under the ASTM D3273 test method. The score of 10, in the ASTM D3273 test, indicates no mold growth in a 4-week controlled laboratory test. The mold resistance of any building product when used in actual jobsite conditions may not produce the same results as were achieved in the controlled, laboratory setting.
